WORK EXPERIENCE

EAGLYS Inc.

December 2024 – Present

Software Engineer

Tokyo, Japan

- Designed and delivered multiple production systems end-to-end, primarily in Python and TypeScript.
 - Built a cross-platform desktop UI (Rust, Tauri, Svelte/TypeScript) with a focus on clean, maintainable code and polished user-facing interactions.
 - Implemented an async-based TCP server handling over 500 concurrent connections in Python.
 - Implemented a vehicle factory CAD map importer and lane editor with Vue.js and Cytoscape.js.
 - Built Dockerized micro-services with gRPC communication and Redis for caching.
 - Established project architecture, coding standards, and CI/CD pipelines for multiple projects.
 - Conducted on-site testing and deployment in a live factory setting in Japan.

Hitachi Vantara

July 2021 – October 2024

DevSecOps Engineer

San Francisco, CA

- Created in-house applications, CI/CD pipelines, and control infrastructure.
 - Full-stack development and CI/CD for lab inventory Django web application (Python/TypeScript), including PostgreSQL database management via Django migrations and custom SQL.
 - Pitched and developed a self-service VM deployment tool in Python, leveraging a REST API and deploying to Azure and vCenter via Terraform while serving hundreds of users across labs in the US, Japan, and England.
 - Upgraded an entire Django application codebase from Python 2 to Python 3, including all dependencies.
 - Led a team of 5 to import lab inventory and cost data using Python. Implemented cost center tracking and depreciation as well as one click reporting on these assets for financial usage and tracking internally.

Associate DevSecOps Engineer

Boston, MA

- Focused on bug fixes and backend enhancements to the core Django application prior to promotion.

EDUCATION

Boston University

Sep., 2017 – May, 2021

Bachelors in Computer Science, Minor in Japanese Language & Literature

Boston, MA

- Subjects such as: Combinatoric Structures, Full Stack Development, Systems, Algorithms, etc.
- Weekly Japanese language exchange, intramural soccer & softball, hackathons.

Kyoto Consortium for Japanese Studies

Spring, 2020

Study Abroad Program at Doshisha University

Kyoto, Japan

- Daily intensive Japanese language, history, and culture study; Homestay in Kyoto with a Japanese family.

PROJECTS

- [Reberu](#): A random dungeon level generator plugin in C++ for Unreal Engine.
- [PeterPong](#): Two-player Pong built in C++ and Raylib to explore lower-level programming concepts.
- [Welding Goggles](#): A mod written in TypeScript for a game called Project Zomboid. It adds a custom 3D model and has logic to seamlessly fit into the game. Currently has over 34,000 subscriptions on the Steam workshop.

SKILLS, LANGUAGES, & INTERESTS

- **Skills:** Python; TypeScript/JavaScript; Vue.js; Java; C++; C#; Jenkins; Django; CI/CD; Terraform; Docker; Linux; PostgreSQL; Redis; GraphQL; Git; Perforce; Agile Methodology; VMware; CMake; Unreal Engine;
- **Languages:** Native English, Intermediate Business Japanese
- **Interests:** game development; playing soccer; hiking; *Catan*; anime; video games; jiu-jitsu; language study;
